PAVEMENT MANAGEMENT

Pavement management is the practice of planning pavement maintenance to maximize the value of a roadway network. It is a strategic process that identifies a maintenance and rehabilitation schedule that will allow for a desired state of good repair over the lifecycle of the pavement.

In New England, asphalt pavement can expect to remain serviceable for up to 15 years or longer depending on a variety of factors including traffic volumes, construction quality, and weather. Throughout the pavement lifecycle, the surface begins to deteriorate and shows signs of cracking, rutting, potholes, and raveling. These distresses appear and will gradually increase in size and quantity over time as the surface continues to deteriorate. Throughout the pavement lifecycle, maintenance and preservation treatments can be performed to extend the useful life of the asphalt pavement. In general, these treatments are less costly and less intrusive to the end user than minor or major rehabilitation, which involves replacing the pavement surface or rebuilding the pavement structure completely.

Image Source: U.S. Department of Transportation Federal Highway Administration

With adequate funding and the right approach, pavement managers can extend the useful life of roads in adequate condition while reserving rehabilitation for roadways in a state of disrepair.

The Town retained a consultant to conduct an inventory and analysis of the road network.

The Town's pavement management process followed a three-step approach:

1. Roadway Network Inventory and Data Collection
2. Analysis and Reporting
3. Capital Planning and Action Planning

The results of the roadway inventory and assessment are contained in the following reports. It should be noted that the costs associated with the maintenance required do not include sidewalk improvements, necessary drainage improvements, or any outside consulting that is required to complete the work.

INFRASTRUCTURE CONDITION ASSESSMENT PAVEMENT REPORT

Town of Pembroke, Massachusetts

Inspections Completed Summer 2021 | Published December 02, 2021

PAVEMENT MANAGEMENT OVERVIEW

Environmental Partners Group, LLC (EP) was retained by the Town to develop a network-level **Pavement Management Program (PMP)**. The PMP is used to establish baseline data to help community decision makers understand the condition of this important infrastructure. The PMP will ultimately support the creation of a comprehensive Capital Improvement Plan, allowing the Town to make informed decisions when prioritizing roadway improvements and investments.

ESTABLISHING THE ICR

Roadway condition data is compiled to facilitate the pavement **Infrastructure Condition Rating (ICR)** calculation for each roadway segment. The ICR rates the roadways surface condition based on a 0 to 100 scale, with a minimum value of 0 meaning the roadway has severe distress or requires major rehabilitation, to a maximum value of 100 for a road identified as having no visible defects and requiring no maintenance at the time of inspections.

PEMBROKES'S PAVEMENT NETWORK

EP evaluated a total of 92.45 centerline miles of roadway as part of this project. The evaluation focused on the Town's accepted roadway network, which are the roadways the Town is responsible for maintaining. The overall Pavement ICR for the road network was found to be 77.62. The network ICR represents a benchmark for the condition of the roads at the time of inspections. This overall ICR will be used for performance measuring of the Town's pavement management program moving forward.

Roadway repair techniques and associated unit costs were defined (as shown below) to develop a Backlog Summary. The backlog provides a snapshot as to how many miles of roadway fall into each repair category and the approximate cost to complete all outstanding maintenance throughout the roadway network. **The current backlog summary for the Town's roadway network is approximately \$10.4 Million.** The backlog will allow decision makers to strategize how to most effectively spend available infrastructure funding and gauge whether additional funding is necessary to improve the roadway network.

With a total of 92.46 miles (1,192,969 square yards) of roadway, the estimated cost to complete all roadway maintenance is: **\$10,461,925**

MAJOR REHABILITATION	MINOR REHABILITATION	PREVENTATIVE MAINTENANCE	ROUTINE MAINTENANCE	NO MAINTENANCE REQUIRED	
3.6% of repairs	23.4% of repairs	36.0% of repairs	12.1% of repairs	24.8% of repairs	
3.35 mi	21.64 mi	33.32 mi	11.22 mi	22.90 mi	92.45 mi
ICR 0-50 \$45.00/sy Estimated Cost: \$1,851,485	ICR 50-70 \$18.00/sy Estimated Cost: \$5,009,296	ICR 70-80 \$8.00/sy Estimated Cost: \$3,441,376	ICR 80-92 \$1.00/sy Estimated Cost: \$159,767	ICR 92-100 \$0.00/sy Estimated Cost: \$0.00	

PAVEMENT MANAGEMENT

Pavement management is the practice of planning pavement maintenance to maximize the value of the roadway network. The goal of a pavement management program is to provide decision makers the tools and data to make effective and timely decisions on maintenance and rehabilitation. The pavement management approach will vary greatly based on the starting point (or Infrastructure Condition Rating) of the overall network. With adequate funding and the right approach, pavement managers have the opportunity to extend the useful life of good roads while rehabilitating roadways in a state of disrepair.

SURVEY PROCESS

The survey process was completed using the latest technology in machine learning. This automated process produces a non-biased assessment of the existing roadway surface condition, and provides high definition photographs every 10 ft along the road network.

Roadways are broken down from intersection to intersection in order to report on the roadway conditions. The EP team also utilizes a database to record additional roadway attribute information such as length, width, square yardage, segment start and end points, and functional classification.

INFRASTRUCTURE BUDGETING

As part of the pavement management process, EP has established a budget scenario builder for the Town to understand how various funding levels will impact the road network over the next five years.

The budget scenarios shown on the right assume the following:

- Baseline deterioration for the roadway network is two points per year, network wide
- The Town will be following a balanced approach to pavement management; meaning it is assumed that routine and preventative maintenance will be performed to roadways when it is necessary
- The models account for a 3% inflation rate (per year) in construction costs over the next five years.

This model is designed to allow Town decision makers to understand how varying budget levels will affect the overall condition rating on the network. The budget levels shown assumes that funding will be used on roadways only and does not account for sidewalk and/or drainage work associated with these projects.

CAPITAL PLANNING AND NEXT STEPS

The final step in the pavement management process is to prioritize roadway repair projects and develop a five-year Capital Improvement Plan (CIP) for roadway rehabilitation projects. EP will meet with Town staff to discuss available treatment options based on the current condition of the roadway network. We have found that the use of both rehabilitation and preservation techniques typically yields the best results to overall network health. This approach allows the Town to maintain good roadways in good condition while also improving roadway condition to those roadways in a state of disrepair.

To assist in the development of this plan, a Cost Benefit Value (CBV) analyses will be completed. This data driven analysis will serve as a guide to prioritize potential roadway projects for inclusion in the CIP. The CBV takes into account traffic volumes, repair types and ICR. Depending on the funding scenario chosen by the Town, the development of a CIP will assist the Town in improving its network rating over time. The roadway CIP will be revisited on a yearly basis and adjusted to accommodate for unanticipated changes to roadway conditions.

Roadway Repair Backlog Summary

Repair Method	Length (mi)	Square Yds	Percent	Estimated
Major Rehabilitation	3.35	41,144.2	3.6 %	\$ 1,851,485
Minor Rehabilitation	21.64	278,294.2	23.4 %	\$ 5,009,296
Preventative Maintenance	33.32	430,172.0	36.0 %	\$ 3,441,376
Routine Maintenance	11.22	159,766.8	12.1 %	\$ 159,767
Defer Maintenance	22.92	283,592.6	24.8 %	\$ 0
Total		92.45	1,192,969	\$ 10,461,925
			Average ICR:	77.62

Note:

These estimated costs account for pavement costs only. Additional costs such as sidewalk/curb ramp rehabilitation, drainage improvements, temporary traffic control, construction administration or engineering are not included.
